DETAILED ACTION

Response to Amendment

1. This communication is in response to the amendments filed 4/9/09 and 7/27/09. Claims 70-71, 76-77, 110-123, 126-145, 148-166, 169-186 and 189 are presented for examination.

Information Disclosure Statement

2. The information disclosure statement filed 5/12/09 has been entered and acknowledged.

Allowable Subject Matter

3. Claims 70-71, 76-77, 110-123, 126-145, 148-166, 169-186 and 189 are allowed. The following is an examiner's statement of reasons for allowance: The primary reasons for the allowance of claims 70-71, 76-77, 110-123, 126-145, 148-166, 169-186 and 189 is the inclusion of the limitation in the claims, which is not found in the prior art references, of a network health-monitoring system using a plurality of remote patient sites with a data management unit connected via at least one central server to a computer used by the healthcare professional configured to establish communication links with the central server in response to information being received from the computer causing the remote patient sites to enter into communication mode and send the information the remote patient site. This along with further limitations set forth by the claims render the application allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Art Unit: 3626

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

In related art (A database for an intensive care unit patient data management system) Fumia teaches the design and implementation of a computerized database for intensive care unit patient data management system.

In related art (EP 251520) Fu discloses a personal health monitoring including sensors for measuring physiological parameter.

The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure as background material and is not of particular significance. These prior art patents fail to teach or fairly suggest a network health-monitoring system using a plurality of remote patient sites with a data management unit connected via at least one central server to a computer used by the healthcare professional configured to establish communication links with the central server in response to information being received from the computer causing the remote patient sites to enter into communication mode and send the information the remote patient site.
